SUMMARY

Proficient Mobile Developer with a solid technical foundation in cross-platform application development. Proven expertise in software architecture, clean code organization, and applying OOP and SOLID principles to build scalable and maintainable solutions. Adept at analyzing UI/UX requirements and leveraging modern frameworks like Flutter to deliver intuitive, high-performance, and user-centric mobile experiences.

WORK EXPERIENCE

Mobile Developer - CSS Can Tho	May 2024 - Present
- Handled complex media streaming requirements by implementing HTTP Live Streaming (HLS), creating an on-device local proxy, and building robust networking and caching mechanisms to ensure uninterrupted video playback. - Engineered a high-performance video feed feature, significantly optimizing scrolling fluidity and minimizing video pre-load sizes for a seamless user experience. - Designed scalable and maintainable code architectures by strictly applying OOP and SOLID principles. - Analyzed UI/UX requirements and optimized application interfaces to deliver intuitive and responsive designs. - Developed, implemented, and maintained cross-platform mobile applications, ensuring overall high performance, stability, and seamless user experiences. - Actively participated in ongoing application maintenance, including rigorous debugging, performance monitoring, and resolving Google Play policy compliance issues to ensure seamless updates.	

SKILLS

- Mobile Development:** Flutter (Dart), Android Native Integration (Platform Channels), Background Processing.
- State Management:** GetX, BLoC.
- Networking & Data:** RESTful APIs, Network Handling, Error Handling, Local Storage & Caching
- Video performance on device:** async throttling, CPU/RAM optimization, thermal control.
- Delivery & Collaboration:** Git, Google Play Release/Deployment.
- Languages:** English.

EDUCATION

Can Tho University - Bachelor of Engineering in Information Systems
Relevant coursework: Object-Oriented Programming, Software Architecture, System Analysis and Design, Database Management.

PROJECTS

1 - Click-ed (Educational Social Network) - [Google Play](#)

- **Description:** An interactive social network focused on video-based learning.
- **Key Contributions:**
 - **Mobile Video Performance:** Optimized feed rendering and playback lifecycle with pooled video controllers and bounded async initialization, delivering smooth scrolling and stable long-session playback while reducing CPU spikes and thermal risk.
 - **Resource Management:** Implemented multi-layer caching and network-aware video delivery (memory + disk cache, cache pruning, request optimization) to lower bandwidth usage, reduce local storage growth, and improve startup/playback consistency.
 - **Playback Reliability:** Added lifecycle-safe navigation and controller cleanup guards to prevent duplicate player instances, race conditions, and playback conflicts across screens.

2 - MyDTU (Student Management Portal) - [Google Play](#)

- **Description:** A comprehensive university management application designed for students of Duy Tan University to efficiently access academic information and services.
- **Key Contributions:**
 - **Architecture & Maintenance:** Restructured the application's codebase to enhance scalability, while actively maintaining and debugging the app to ensure stable, long-term performance.
 - **Performance Optimization:** Built a robust local caching system and optimized network handling to significantly reduce redundant API requests, improving app responsiveness and reducing server load.
 - **Release & Deployment:** Handled regular version updates and managed the end-to-end deployment process on the Google Play Console.

3 - Linkeep (Link Management & Social Sharing App) - [Google Play](#)

- **Description:** Developed Keep Link, a cross-platform Flutter app for link management and social sharing, with offline-first architecture, secure access control, deep link navigation, and real-time synchronization.
- **Key Contributions:**
 - Built offline-first data flow (SQLite + in-memory cache) with write-through sync to Firebase Realtime Database for fast, consistent cross-device data.
 - Developed friend-sharing flows via deep link, QR, and email, including full request lifecycle and real-time updates for shared categories.
 - Implemented robust deep link routing and in-app browser handling, ensuring correct screen navigation from shared URLs and reliable fallback to external browser when needed.
 - Implemented security features with PIN/biometric authentication and private category access control.
 - Optimized link intake and viewing: share intent/clipboard URL parsing, metadata auto-fetch, and WebView improvements (cache-first loading, ad/popup blocking, TikTok-specific handling).
 - Maintained app stability and managed Android release cycles on Google Play Console, including versioning and policy compliance.
